

# Dashboard Templates, Charts, Graphs & Reports for Jira

This comparison summarizes how our Jira app covers key reporting capabilities across Custom Charts, Issue List, Dynamic Filter Controller, and Platform/Admin features. Where capabilities can be consolidated into a simpler workflow, we cover them directly through our gadgets.

## Custom Charts Gadget

| Feature                                             | Available in our app |
|-----------------------------------------------------|----------------------|
| 10 chart types (Line, Bar, Pie, Funnel, Tile, etc.) | ✓                    |
| 1D Charts (single dimension)                        | ✓                    |
| 2D Charts (two dimensions with grouping)            | ✓                    |
| Custom JQL as data source                           | ✓                    |
| Saved filters as data source                        | ✓                    |
| Projects as data source                             | ✓                    |
| Dynamic controller as data source                   | ✓                    |
| Chart by any Jira field                             | ✓                    |

|                                                 |   |
|-------------------------------------------------|---|
| Group by second dimension (2D charts)           | ✓ |
| Advanced segments with custom JQL               | ✓ |
| Advanced segments with saved filters            | ✓ |
| Overlapping segments handling                   | ✓ |
| Average line                                    | ✓ |
| Cumulative total                                | ✓ |
| Goal line                                       | ✓ |
| Trend line                                      | ✓ |
| Change segment colors                           | ✓ |
| Group multiple values into one segment          | ✓ |
| Hide/show segments (excluded from calculations) | ✓ |
| Ordering modes: Count, A to Z, Custom           | ✓ |
| Rename segments                                 | ✓ |
| Reorder segments with custom ordering           | ✓ |
| Auto refresh                                    | ✓ |
| Number format & decimals                        | ✓ |
| Tooltips, labels, and legends                   | ✓ |
| Export to CSV                                   | ✓ |
| Export to PDF                                   | ✓ |
| Export to PNG                                   | ✓ |
| Import/Export configuration codes               | ✓ |
| Pre-built Chart templates                       | ✓ |

## Issue List Gadget

| Feature                               | Available in our app |
|---------------------------------------|----------------------|
| Configurable columns (any Jira field) | ✓                    |
| Custom JQL as data source             | ✓                    |
| Saved filters as data source          | ✓                    |
| Dynamic controller as data source     | ✓                    |
| Quick Filters (saved filter + JQL)    | ✓                    |
| AND/OR logic for quick filters        | ✓                    |
| Smart Labels (JQL-based)              | ✓                    |
| Smart Labels (filter-based)           | ✓                    |
| Sorting by any column                 | ✓                    |
| Pagination & display customization    | ✓                    |
| Export to CSV                         | ✓                    |
| Export to PDF                         | ✓                    |
| Export to PNG                         | ✓                    |
| Pre-built table templates             | ✓                    |
| Import/Export configuration codes     | ✓                    |

## Dynamic Filter Controller

| Feature                                  | Available in our app |
|------------------------------------------|----------------------|
| Connect to multiple gadgets on dashboard | ✓                    |
| Simple search mode                       | ✓                    |
| Advanced filter mode                     | ✓                    |
| Control Custom Charts gadgets            | ✓                    |
| Control Issue List gadgets               | ✓                    |

| Feature                          | Available in our app |
|----------------------------------|----------------------|
| Control Time in Status gadgets   | ✓                    |
| Control Pivot Table gadgets      | ✓                    |
| Control CFD gadgets              | ✓                    |
| Control WIP Aging Charts gadgets | ✓                    |
| Preset tabs (named filter views) | ✓                    |
| Reference ID for gadget linking  | ✓                    |
| Pre-built tab templates          | ✓                    |

## Time in Status Gadget

| Feature                                                                                                                              | Available in our app |
|--------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| Changelog-based time calculation (not current state)                                                                                 | ✓                    |
| 7 report types (Time in Status, Average Time, Time per Date, Status Count, Transition Count, Time in Assignee, Status Entrance Date) | ✓                    |
| Board data source                                                                                                                    | ✓                    |
| JQL / Projects / Saved Filter data source                                                                                            | ✓                    |
| Dynamic Filter Controller integration                                                                                                | ✓                    |
| Status Groups (custom named bands – Cycle Time, Lead Time)                                                                           | ✓                    |
| Work Schedule configuration (per-day hours and working days)                                                                         | ✓                    |
| 10 time format options (Business Days/Hours/Minutes, Decimal, etc.)                                                                  | ✓                    |
| Status filtering (Auto / All / Custom select)                                                                                        | ✓                    |
| Chart outputs (column, bar, line per report type)                                                                                    | ✓                    |

|                                              |   |
|----------------------------------------------|---|
| Date range filter (rolling / custom from-to) | ✓ |
| Export to CSV                                | ✓ |
| Export to PNG                                | ✓ |
| Import/Export configuration codes            | ✓ |

## Pivot Table Gadget

| Feature                                                                   | Available in our app |
|---------------------------------------------------------------------------|----------------------|
| 9 display types (Table, 3 Heatmaps, Column, Bar, Line, Stacked Area, Pie) | ✓                    |
| Up to 3 row fields (multi-level nested grouping)                          | ✓                    |
| Up to 3 column fields (multi-level nested grouping)                       | ✓                    |
| 7 aggregation methods (Count, Sum, Avg, Min, Max, Count%, Sum%)           | ✓                    |
| Heatmap coloring (Red, Blue, Green, Grey)                                 | ✓                    |
| Make values clickable (drill-through to Jira issue list)                  | ✓                    |
| Date field formatting (day, week, month, quarter, year formats)           | ✓                    |
| Show totals row and column                                                | ✓                    |
| Show percentage column                                                    | ✓                    |
| Show average column (all values or non-zero only)                         | ✓                    |
| Auto-refresh                                                              | ✓                    |
| JQL / Projects / Saved Filter / Dynamic Controller data source            | ✓                    |
| Export to CSV                                                             | ✓                    |
| Export to PNG                                                             | ✓                    |
| Import/Export configuration codes                                         | ✓                    |

## Cumulative Flow Diagram

| Feature                                                                                                                             | Available in our app |
|-------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| 6 band modes (status categories, individual statuses, board columns, board column categories, work item types, custom field values) | ✓                    |
| Stacked area chart visualization                                                                                                    | ✓                    |
| Calculate by: Issue Count, Story Points, SP Estimate, Time Estimate, Custom Numeric Field                                           | ✓                    |
| Rolling / Fixed / Sprint / Release date range modes                                                                                 | ✓                    |
| Latest sprint auto-select (always shows current sprint)                                                                             | ✓                    |
| Board integration (column definitions as bands)                                                                                     | ✓                    |
| Include sub-tasks toggle                                                                                                            | ✓                    |
| Exclude bands / custom band order                                                                                                   | ✓                    |
| Custom band colors                                                                                                                  | ✓                    |
| Show as % of total                                                                                                                  | ✓                    |
| Hide weekends                                                                                                                       | ✓                    |
| Export to CSV                                                                                                                       | ✓                    |
| Export to PNG                                                                                                                       | ✓                    |
| Import/Export configuration codes                                                                                                   | ✓                    |

## WIP Aging Charts Gadget

| Feature                     | Available in our app |
|-----------------------------|----------------------|
| Scatter chart visualization | ✓                    |
| 5 age calculation methods   | ✓                    |
| Average reference line      | ✓                    |

| Feature                                       | Available in our app |
|-----------------------------------------------|----------------------|
| Threshold / SLA reference line                | ✓                    |
| Percentile reference line (configurable)      | ✓                    |
| Display by statuses or board columns          | ✓                    |
| Logarithmic scale option                      | ✓                    |
| Data table view (switch from scatter to list) | ✓                    |
| Tilted X-axis labels                          | ✓                    |
| Exclude weekends from age calculation         | ✓                    |
| Export to CSV                                 | ✓                    |
| Export to PNG                                 | ✓                    |
| Import/Export configuration codes             | ✓                    |

## Platform & Admin Features

| Feature                                                       | Available in our app |
|---------------------------------------------------------------|----------------------|
| Jira dashboard integration                                    | ✓                    |
| Admin feature toggles                                         | ✓                    |
| Dark/Light mode theming                                       | ✓                    |
| Per-gadget enable/disable (7 gadgets)                         | ✓                    |
| Data source restrictions (Projects, Filters, JQL, Controller) | ✓                    |
| Global export access control                                  | ✓                    |
| Global number format, date format, decimal places defaults    | ✓                    |

## Coverage Summary

**Total features listed: 109 Covered by our solution: 109 Overall coverage: 100%**

Our app delivers complete coverage across all seven gadgets — Custom Charts, Issue List, Dynamic Filter Controller, Time in Status, Pivot Table, Cumulative Flow Diagram, and WIP Aging Charts — plus full platform and admin controls.
