

Content Formatting Macros: Tabs Navigation Visibility CSS

1. Overview

Content Formatting Macros: Tabs Navigation Visibility CSS is a Confluence Forge app that helps space owners and page authors to :

- Organize content into tabbed navigation to reduce long-scroll pages.
- Standardize page formatting with reusable visual components.
- Control content access using Conditional Show/Hide rules.
- Reduce clutter and improve compliance by managing files through Attachment Control Center.

2. Getting Started

2.1 Prerequisites

Follow these steps before using the app in Confluence:

- **Confluence Permissions**
 - Rights to edit pages where you want to insert macros.
 - Permission to add macros in the editor.
 - For Attachment Control Center: permission to view/delete attachments (as per your Confluence space permissions).
- **App Installation**
 - Verify the app is installed and enabled by your Confluence administrator.
 - Macros appear in the Confluence editor macro picker.

- Attachment Control Center appears in Apps / Global page and Global settings.
- **Quality of Inputs**
 - Use consistent labels, clean page hierarchy, and clear naming conventions.
 - Organize content into meaningful sections to get the best navigation experience.

2.2 Launching the App

1. Open a Confluence page in Edit mode.
2. Type / to open the macro picker.
3. Search and insert one of the macros from:
 - Advanced Content Navigation.
 - Rich Content Formatting.
 - Conditional Show/Hide.
4. 

2.3 First-Time Use

2.3.1 Advanced Content Navigation

The Advanced Content Navigation module helps you build guided tabbed navigation experiences inside Confluence pages.

A) Tab Label Content Mapper

Purpose: Create dynamic tabs from pages matching selected labels (auto-updating).

The screenshot shows the 'Tab Label Content Mapper: Generate tab content from labels' interface. It features a 'Preview' section on the left with 'Example 1' and 'Example 2' tabs. A message states: 'Preview will display changes after you create and set up your navigation elements on the left-hand side. Switch to the "Design" tab to choose your navigation design.' The right side has two tabs: 'Content' and 'Appearance'. The 'Content' tab is active, showing an 'Elements' section with a 'Labels' input field containing 'favourite', a 'Filter' input field with a placeholder 'Enter CQL...', and a 'Settings' section with a toggle for 'Display elements vertically'. At the bottom right are 'Cancel' and 'Save' buttons.

Steps to Use

Output

Tabs automatically display pages that match your labels.

Updates when new labeled pages are added.

B) Tab Parent Content Mapper

Purpose: Create tabs from child pages under a selected parent page.

Steps to Use

Output

Tabs represent child pages under that parent.

Ideal for structured documentation trees.

C) Tab Confluence Page Mapper

Purpose: Create tabs from selected Confluence pages (manual curated navigation).

Steps to Use

Output

A curated tab set for hub pages, onboarding portals, or guides.

D) Create Custom Tabs

Purpose: Create fully custom tabs with rich content and embedded Confluence pages.

Steps to Use

Output

Flexible, designed navigation tabs for "Start here" and homepage experiences.

2.3.2 Rich Content Formatting

The Rich Content Formatting module helps you keep pages consistent, readable, and visually clean using reusable formatting blocks.

Formatting Macros Included

A) Alert

Purpose: Highlight warnings, notices, or important updates.

Steps to Use

B) Tooltip

Purpose: Provide extra context on hover (inline help).

Steps to Use

C) Footnotes + Footnotes Summary

Purpose: Add reference notes inline and auto-generate a full summary.

Footnotes: Add references and clarifications without interrupting reading

Preview

Your footnote will appear within your text like this, once the page is published.¹ If you hover over the footnote it will display the text. This text will also show in the footnote summary if you include one.

Steps to Use (Footnotes Summary)

D) Pop-up Dialog

Purpose: Show additional information/media in a popup.

Steps to Use

E) Background

Purpose: Visually separate sections using background colors/images.

Steps to Use

F) Buttons

Purpose: Add clear CTAs (navigation and actions).

Steps to Use

G) Advanced Expand

Purpose: Keep pages clean using expandable sections.

Steps to Use

H) Progress bar

Purpose: Display a clickable multi-step progress bar across Confluence pages.

Steps to Use

I) Advanced Card

Purpose: Create a clickable grid of cards for visual navigation and homepages.

Steps to Use

J) Interactive Banner

Purpose: Create a carousel of slides with background images and call-to-action buttons.

Steps to Use

K) Numbered Headings

Purpose: Automatically apply numbered headings (1, 1.1, 1.1.1...) to structured documents.

Steps to Use

L) Divider

Purpose: Add a styled horizontal divider to visually separate sections on a Confluence page.

Steps to Use

M) Custom Fonts

Purpose: Add a fully styled standalone title anywhere on a page - with full control over size, weight, color, and alignment.

Custom Fonts: Add a styled text to your page

Steps to Use

O) User Profile

Purpose: Display a visual grid of Confluence user profile cards-with 5 card styles, cover images, and direct links to user profiles.

Steps to Use

P) Status

Purpose: Add a reader-clickable, color-coded status label to any page. Readers update the status in view mode-no page editing required.

Status: Shows a color-coded status label for quick visibility

Steps to Use

Employee Onboarding Template

Purpose: Create a complete onboarding hub instantly-with a hero banner, week-by-week journey tabs, resource cards, tools table, FAQs, and two auto-linked child pages.

Steps to Use

Team Hub Template

Purpose: Create a professional team or company homepage instantly - with a 4-slide rotating banner, HR FAQ accordion, department sections, and a resource link grid.

Steps to Use

2.3.3 Conditional Show/Hide

This module lets you control what content appears to which audience, directly inside a page.

A) Conditional Show

Purpose: Display content only when conditions are met.

Steps to Use

B) Conditional Hide

Purpose: Hide content dynamically when conditions match.

Conditional Hide: Hide content based on viewer or groups

Steps to Use

2.3.4 Attachment Control Center

The Attachment Control Center helps admins and space owners review and manage attachments across Confluence in a centralized way. It supports workspace hygiene, storage cleanup, and compliance-focused governance.

Purpose: Use Attachment Control Center to identify, review, and clean up attachments across spaces so your Confluence environment stays organized and manageable.

Steps to Use

Output

- A centralized view of attachments across Confluence.

- Easier identification of clutter, outdated files, or oversized attachments.
- Faster cleanup and better storage control.
- Improved support for governance and compliance workflows.

Best Use Cases

- Cleaning up outdated attachments.
- Identifying large files that consume storage.
- Supporting retention and compliance reviews.
- Running regular maintenance across active spaces.

Best Way to Start

To maximize value from Content Formatting, Navigation and Visibility for Confluence:

- **Start with one documentation hub page and add:**
 - Tab Parent Content Mapper (if page tree is clean).
 - Tab Label Content Mapper (if labels are reliable).
- **Standardize layouts using:**
 - Alert + Buttons + Background + Advanced Expand.
- **Add governance gradually:**
 - Use Conditional Show/Hide for internal vs external content sections.
- **Run cleanup regularly:**
 - Use Attachment Control Center quarterly (or monthly for high-traffic spaces).

3. Administration

3.1 Access

- Macros are available inside the Confluence page editor.
- Attachment Control Center is available from:
 - Confluence global page.
 - Confluence global settings (admin area).

3.2 Capabilities

Admins and space owners can use Content Formatting, Navigation and Visibility for Confluence to:

- Reduce navigation chaos using structured tabs.
- Enforce consistent formatting across team pages.
- Control visibility using rules-based content governance.
- Prevent attachment sprawl with centralized review and cleanup.

3.3 Governance Recommendations

- Define standard label conventions for navigation.
- Define audience groups for visibility controls.
- Establish attachment retention rules (what to delete, what to keep).

4. Tips & Best Practices

4.1 Advanced Content Navigation

- Use Tab Parent Content Mapper for structured documentation trees.
- Use Tab Label Content Mapper for auto-updating knowledge bases.
- Use Tab Confluence Page Mapper for curated "Start here" hubs.
- Keep tab titles short and consistent (Overview, How-To, FAQ, Runbooks).

4.2 Rich Content Formatting

- Use Alert sparingly for high-importance messages.
- Use Advanced Expand for long FAQ/troubleshooting sections.
- Use Buttons for "next step" navigation and key links.

4.3 Conditional Show/Hide

- Start with simple rules first (group-based visibility).
- Always validate with different user roles (viewer vs editor vs admin).

4.4 Attachment Control Center

- Filter by large attachments first to reclaim storage quickly.
- Run periodic cleanup to avoid clutter and compliance risk.

5. Limitations

Navigation output depends on:

- Page permissions (users only see what they have access to).
- Label accuracy and content organization.

Conditional Show/Hide depends on:

- Correct group/user setup and rule configuration.
- Users' permissions & visibility constraints in Confluence.

Attachment Control Center depends on:

- Delete permissions (users without delete rights can't remove attachments).
- Very large spaces may require filtering and cleanup in smaller batches.
