

LaTeX Math Formulas & UML Diagrams (ERD & Flowcharts)

Create clean, editable equations and diagrams directly inside Confluence no screenshots, no external tools.

What this app enables

- **Editable documentation:** keep formulas and diagrams maintainable over time.
- **Faster reviews:** clearer specs and visuals reduce back-and-forth.
- **Standardization:** consistent formatting across teams and spaces.

Where to use it

Use this app in:

- Architecture & design docs.
- RFCs / PRDs / technical specs.
- Runbooks and onboarding pages.
- Data/ML notes, metrics definitions, and research summaries.

Quick Start

1. Open any Confluence page → click **Edit**
2. Type / and search for the macro you need:
 - Latex inline equations
 - Latex block equations
 - Diagrams

3.

Add content

confirm live preview

Publish

Macro Guide

1) Latex inline equations

Best for: formulas inside sentences (lightweight, readable).

Example use cases: definitions, acceptance criteria, small calculations, constraints.

How to Use

Example

$E = mc^2$

Clovity Latex Inline Editor
Cancel
Save Changes

SOURCE CODE	PREVIEW ✓ KaTeX (latex)
$E = mc^2$	$E = mc^2$

Physics
Chemistry
Trigonometry
Number Theory
Advanced
Sets & Logic

Fraction

Square Root

Nth Root

Exponent

Subscript

Sum

2) Latex block equations

Best for: larger, display-style formulas (specs, research, engineering math).

Example use cases: metrics definitions, algorithms, statistical formulas.

How to Use

Example

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

SOURCE CODE	PREVIEW ✓ KaTeX (latex)
$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$	$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$

Basic Algebra **Calculus** Linear Algebra Statistics Physics Chemistry Trigonometry Number Theory Advanced Sets & Logic

Derivative

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

Chain Rule

$$\frac{d}{dx}[f(g(x))] = f'(g(x)) \cdot g'(x)$$

Product Rule

$$(fg)' = f'g + fg'$$

3) Diagrams

Best for: visualizing architecture, processes, and data models

Supports: Flowcharts, Sequence diagrams, ERDs, Gantt (and more via Mermaid syntax)

How to Use
