

Reports, Charts, Templates, CQL & Export for Confluence

1. Overview

When your Confluence spaces get large, it gets hard to see what's happening. Pages pile up, content goes stale, and there's no easy way to get a clear picture of your data.

This app solves that. It lets you build reports, view charts, and export data - all inside Confluence, without writing any code.

What you can do with this app:

- Build live reports directly inside Confluence pages.
- See your data visually with tables, charts, and flexible layouts.
- Filter content using simple search or advanced query tools.
- Reuse report setups across teams and pages.
- Export data to CSV or JSON for use outside Confluence.
- No technical skills needed - fully visual, point-and-click.

This is designed for teams who want data visibility, reporting, and insights inside Confluence - without coding or external tools.

2. What's Included

Data Sources - Spaces & CQL

Pull Confluence data in two flexible ways depending on your use case.

Includes:

- **Spaces Mode:** visually pick one or more Confluence spaces.
- **Page Selection:** narrow down to specific pages.

- **Custom CQL Mode:** write advanced queries to get exactly the data you need.
- **Auto-fetch Results:** data loads automatically. No manual refresh.
- **Real-time Query Validation:** if your query has an error, you see it instantly.

Report Builder - Columns & Expansions

Turn raw Confluence data into a structured, readable report:

- **Column Builder:** choose what data fields appear as columns.
- **Explore Fields:** browse all available data to find what you need.
- **Expansions Panel:** unlock extra details like edit history, contributors, and page properties.
- **Drag-and-Drop Reordering:** rearrange columns however you like.
- **Dynamic Field Mapping:** connect live data straight to your report columns.

Block Types - Data Rendering

Control how each column looks on screen:

- **Basic:** plain text. Simple and clean.
- **Text:** styled text with custom formatting and fallback values.
- **Link:** turn URLs into clickable links.
- **Image:** show profile photos, logos, or thumbnails.
- **Collection:** handle lists of values like labels or contributors.
- **Regex:** extract or reformat data using custom patterns.

Filters & Search

Show only the data that matters:

- **Quick Search:** type to filter results instantly.
- **Advanced Filters:** combine field, operator, and value rules.
- **12 Operators:** equals, contains, greater than, regex, and more.
- **AND Logic Filtering:** stack multiple filters together.
- **Scope Control:** filter a single column or the full dataset.

Layouts & Charts

Display your data in the format that works best for your audience:

Layouts:

- **Table** - structured grid, sortable by column.
- **List** - vertical card layout for easy reading.
- **Grid** - visual tile-based view.
- **Paragraph** - narrative style, like a written summary.

Charts:

- **Bar Chart** - compare values across categories.
- **Line Chart** - track trends over time.
- **Pie Chart** - show how parts add up to a whole.

Templates

Start reporting immediately with ready-made setups:

- **Pre-built templates** for audits, activity tracking, and content analytics.
- **One-click** to apply - the full configuration loads automatically.
- **Auto-lock** protects the template structure from accidental changes.
- **Editable mode** unlock and customize whenever you need to.

Raw View - Debugging

Need to check what's actually in your data? Raw View lets you inspect it directly:

- Full JSON viewer - see the complete data response.
- Field search and highlight - find specific fields fast.
- Record-by-record navigation - step through results one at a time.
- Copy JSON - grab the data for debugging or reuse elsewhere.

Import, Export & Sharing

Share reports and collaborate across teams:

- **JSON Import/Export:** share full report configurations between pages or teams.
- **CSV Export:** download data in a format any spreadsheet app can read.
- **JSON Data Export:** for developers and API integrations.
- **Reusable Report Recipes:** standardize how your teams report across the organization.

Live Reports & Publishing

Embed live, always-current reports directly inside any Confluence page:

- **Live data:** reports refresh automatically. Always up to date.
- **Permission-aware:** users only see data they are allowed to access.
- **Pagination:** handles large result sets cleanly.
- **Configurable limits:** control how many results appear.

3. Use Cases

• Content Audits

- Find pages that have not been updated in a long time.
- See who last edited each page and when.
- Export a list for cleanup campaigns.

• Team Directories

- Show team members with profile photos.
- Build a visual team grid inside Confluence.
- Link directly to each person's pages and contributions.

• Activity Dashboards

- Track how much content is being created over time.
- See which spaces are most active.
- Visualize team engagement with charts.

• Knowledge Insights

- Understand how content is distributed across your spaces.
- Spot gaps - topics with little or no documentation.
- Analyze which pages and spaces are actually being used.

• Compliance & Governance

- Monitor who owns which pages and when they were last reviewed.
- Generate audit-ready reports on demand.
- Export structured datasets for compliance review.

4. Quick Start

Step 1: Add the Report Macro Open any Confluence page. Click Edit, type / and search for Reports. Insert the app.

Step 2: Select a Data Source Choose Spaces to pick visually, or use Custom CQL to write an advanced query. Check the live preview to confirm results.

Step 3: Build Your Report Add columns using field labels and paths. Use Explore to discover available fields. Enable expansions for extra data like history and contributors.

Step 4: Filter & Customize Add filters to narrow your results. Pick a layout - Table, Grid, List, and so on. Switch to a chart if needed.

Step 5: Save & Publish Set your result limit. Click Save. The live report appears on the page immediately.

5. Recommended Starter Setup

Not sure where to begin? This setup works for most teams and takes just a few minutes.

Data Source: Use Spaces mode, or try this CQL to find pages not updated in 40+ days: `type=page AND lastmodified < now("-40d") ORDER BY lastmodified ASC`.

Layout: Table (or Grid for a visual tile view).

Columns: Title, Space, Created Date, Last Modified.

Optional Columns: Created By, Page Link.

Expansions to enable: space, history, version.

Verify: Make sure all columns load correctly with no blank values.

Export: Download as CSV if you need the data in a spreadsheet.

Save: Save the configuration - your report is now live.

6. Key Benefits

- **Always up to date:** reports pull live data from Confluence every time the page loads. No manual refresh needed.
- **No coding required:** everything is point-and-click. Build reports without any technical knowledge.
- **Flexible data access:** use Spaces mode for quick setup, or write CQL queries for advanced control.
- **Multiple ways to view data:** switch between tables, grids, lists, and charts depending on what you need.
- **Share configurations easily:** export a report setup and share it with other teams in seconds.
- **Secure and permission-aware:** users only see content they have access to.
- **All-in-one place:** reporting, analytics, and export without needing any external tools.
